Data Analyst Intern: Bindiya Anand (Inter563)

StreamFlix Content Analytics Project

Phase 4: Management Summary Report

To: The CEO, StreamFlix
From: Bindiya Anand, Data Analyst Intern
Date: October 2026

1. Executive Summary

StreamFlix is in good overall health. Of our 15,000 subscribers, 74.66% are still active, and 25.34% have left; both numbers are within the healthy range. We earn $175,868.51 every month, which is $15.70 for each active subscriber. People finish 65.33% of what they watch, and about 68% of written reviews are positive. The main worry is that newer subscribers are leaving faster than older ones. A second worry is that about 2,000 titles will lose their licence within the next 12 months, and licensed titles bring in most of our viewing. This report explains what we found and what we suggest doing next.

Key numbers at a glance

Measure	Result	What it means
Active subscribers	74.66% (11,199 of 15,000)	Most subscribers are still with us
Subscribers who left	25.34% (3,801)	Within the healthy range
Monthly recurring revenue	$175,868.51	Money coming in every month
Revenue per active subscriber	$15.70	Average monthly payment
Share of each title people finish	65.33%	People finish about two-thirds of what they watch
Watchlist titles later watched	46.23%	Nearly half of saved titles get watched
Positive reviews	68.2% of 110K	Subscribers are mostly happy
Average star rating	3.55 out of 5	Good, but with room to improve

2. Top 3 Findings

(i) The business meets all its health goals. Active subscribers, subscribers who left, completion and watchlist use are all in the healthy range. Premium, Standard and Basic with Ads are all well used: Standard is the biggest plan (about 41% of subscribers), and Basic with Ads and Premium each hold about 30%.

(ii) Drama, Comedy and Action drive our viewing, and TV Shows do most of the work. Drama has the largest share of watch time (14.9%), then Comedy (12.8%) and Action (11.8%). TV Shows make up about 86.5% of viewing time; Movies make up only 13.5%. The top 10% of titles bring in 31.10% of all plays, and our most-watched title, Gilded Throne, has about 35,000 watch hours. StreamFlix Originals bring 27.18% of all watch hours; the other 72.83% comes from licensed titles.

(iii) Newer subscribers stay for a shorter time. Of people who joined in 2017, 97.36% were still with us after 12 months. For people who joined in 2025, that falls to 81.02%. Subscribers who joined in 2026 are also leaving sooner: only 89.88% were still here after 3 months, compared with about 99% for earlier years.

3. Risks Identified

- Faster early exits. Each new group of subscribers is keeping fewer people than the one before. If this continues, the overall number of subscribers will go down even as we keep signing people up.

- Licence expiries. About 2,000 titles are due to expire in the next 12 months. Since licensed titles bring about 73% of watch hours, losing popular ones would hurt viewing. Also, 21.84% of titles (1,966) have no expiry date recorded, so the true number could be different.
- Spending that may not pay off. Across the catalogue, we get only 0.16 watch hours for every $1,000 spent. Stand-Up (0.137), Musical (0.138), Sci-Fi (0.141), and Reality (0.142) give the least back. Stand-Up and Musical also have the smallest share of viewing.
- Reliance on a few hits. Almost a third of plays come from just 10% of titles, so a small group of titles carries a lot of the platform.
- Mixed feedback. About 12,000 reviews (roughly 11%) are negative, and the average rating of 3.55 out of 5 shows many people rate us as only "okay" (3 stars is the second most common rating).
- Viewing data is uneven over time. Almost all recorded viewing is from 2025 and 2026, with a very large jump in the latest months. We should not call this growth until we confirm that the earlier years are fully recorded.

4. Opportunities

- Keep new subscribers longer. This is the biggest chance to protect revenue, because the drop happens early in a subscriber's life.
- Grow the genres that give the best return. Animation (0.207 watch hours per $1,000), Kids & Family (0.177), Documentary (0.171), and Action (0.170) give the most viewing for the money spent.
- Turn saved titles into viewing. Only 46.23% of watchlist titles are watched, so more than half of what people save is never played.
- Focus on our biggest markets and screens. The United States, India and the United Kingdom have the most viewing. Smart TVs (221K sessions) and Mobile (176K sessions) are used the most.
- Reach the right age groups. Subscribers aged 35 to 44 are our largest group and watch the most in total, while those aged 45 to 54 watch the most per person.

5. Recommendations

- Start a first-90-days programme for new subscribers. Send a welcome guide, suggest titles based on what they like, and remind them of saved titles. Track whether 3-month and 12-month retention improves for the 2026 group.
- Plan licence renewals now. Make a list of the titles that expire in the next 12 months, rank them by watch hours, and decide early which ones to renew. Fill in the missing expiry dates for the 1,966 titles without one.
- Review spending before adding more in low-return genres. Check Stand-Up, Musical, Sci-Fi and Reality, and consider putting more of the budget into Animation, Kids & Family, Documentary and Action.
- Move more viewers from saved titles to watching. Use reminders and home-screen picks to lift watchlist use above 46%, and promote titles outside the top few hits so viewing is spread more widely.
- Confirm the viewing records for earlier years. Before we report any growth in viewing to the board, check that all years are fully recorded.

6. About the Data

We checked all six data files before the analysis. We found no duplicate records, broken links between files, or viewing sessions longer than the title itself. Churn dates matched account status and every review had a valid sentiment. The only blank values were churn dates (for active subscribers, as expected) and licence expiry dates for 21.84% of titles. The figures in this report come from our data checks, charts, business measures, and dashboard.
