StreamFlix EDA Report

Phase 2: Exploratory Data Analysis

Kindly view the Python Notebook file at this link

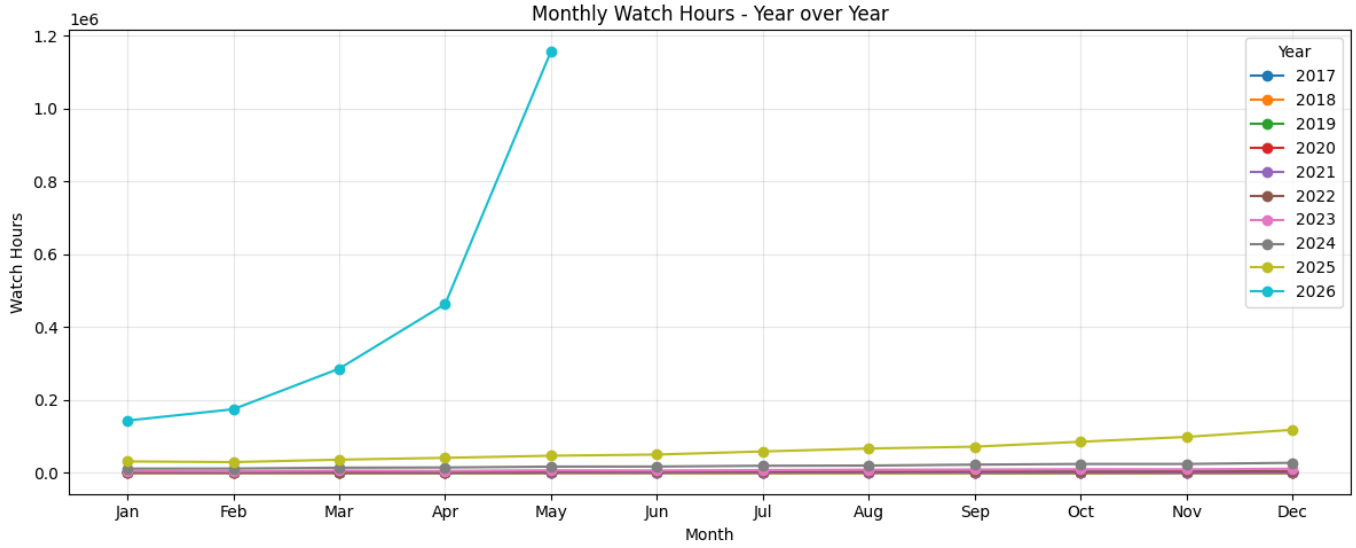

1. Monthly Viewing Volume

Observation:

May 2026 recorded the highest number of viewing sessions (46,617), followed by April 2026 (18,750). Viewing activity increased sharply in the latest months shown, so check whether the dataset has uneven monthly coverage.

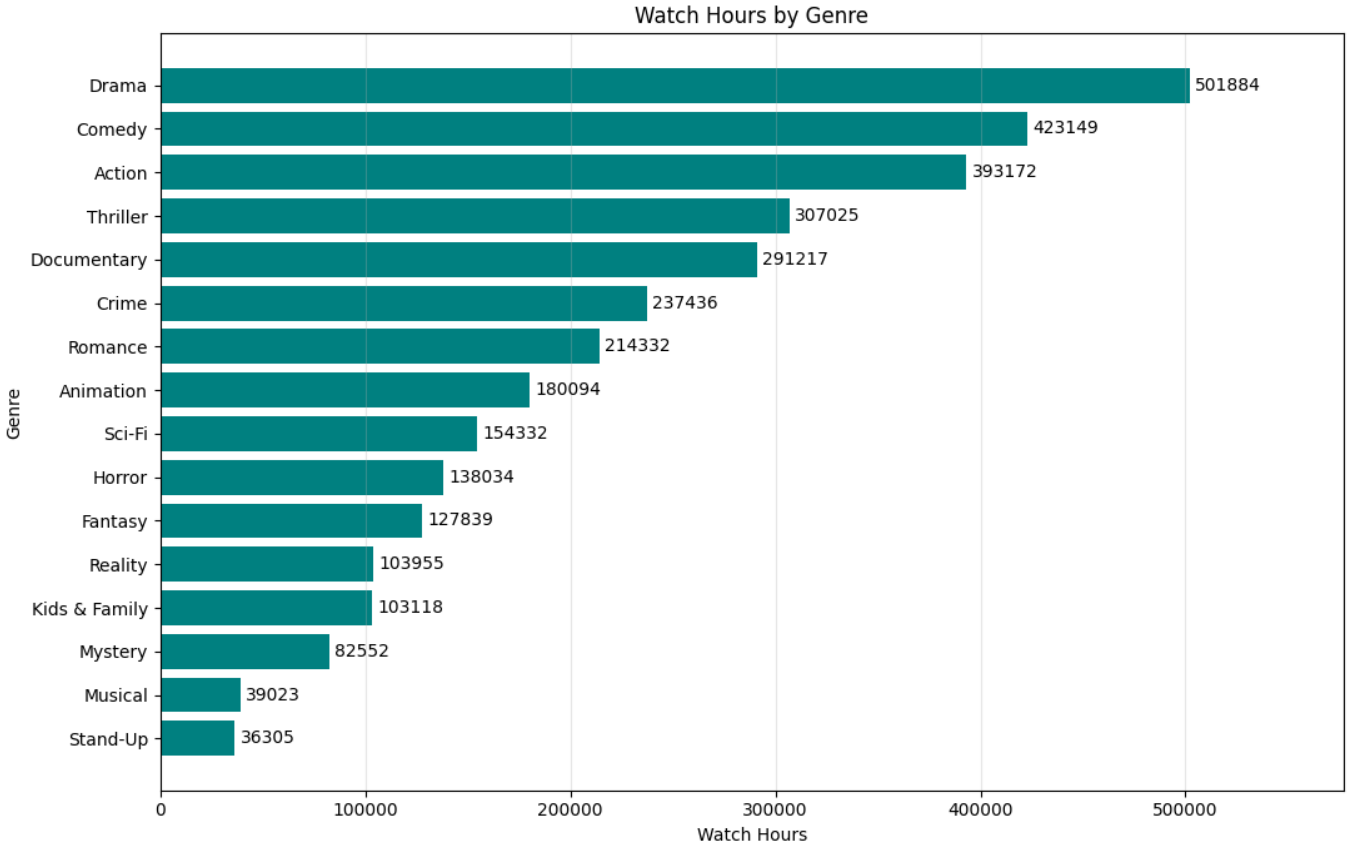

2. Monthly Watch Hours Trend

Observation:

Recorded viewing activity rises substantially over the years, with the largest totals in 2025 and 2026. However, these years may contain more records or incomplete periods, so the increase should not automatically be interpreted as growth in viewer engagement.

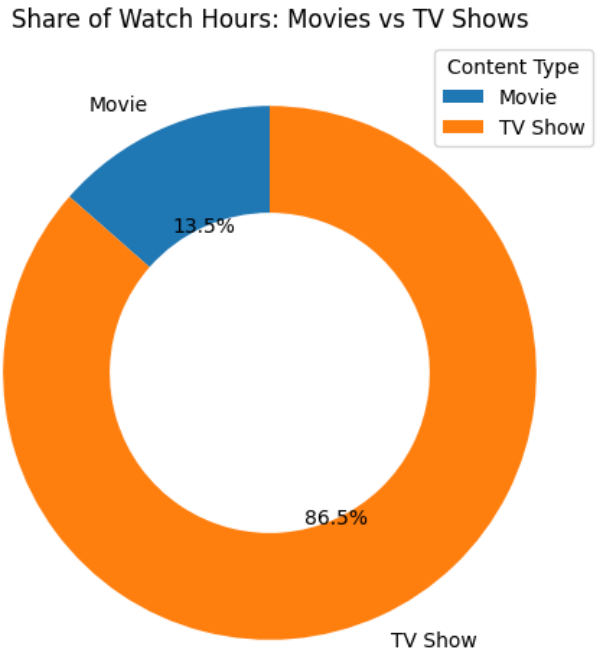

3. Genre-wise watch hours share

Observation:

Drama contributes the largest share of viewing time (14.9%), followed by Comedy (12.8%) and Action (11.8%). Musical and Stand-Up have the smallest shares, suggesting lower overall viewing demand for these genres in this dataset.

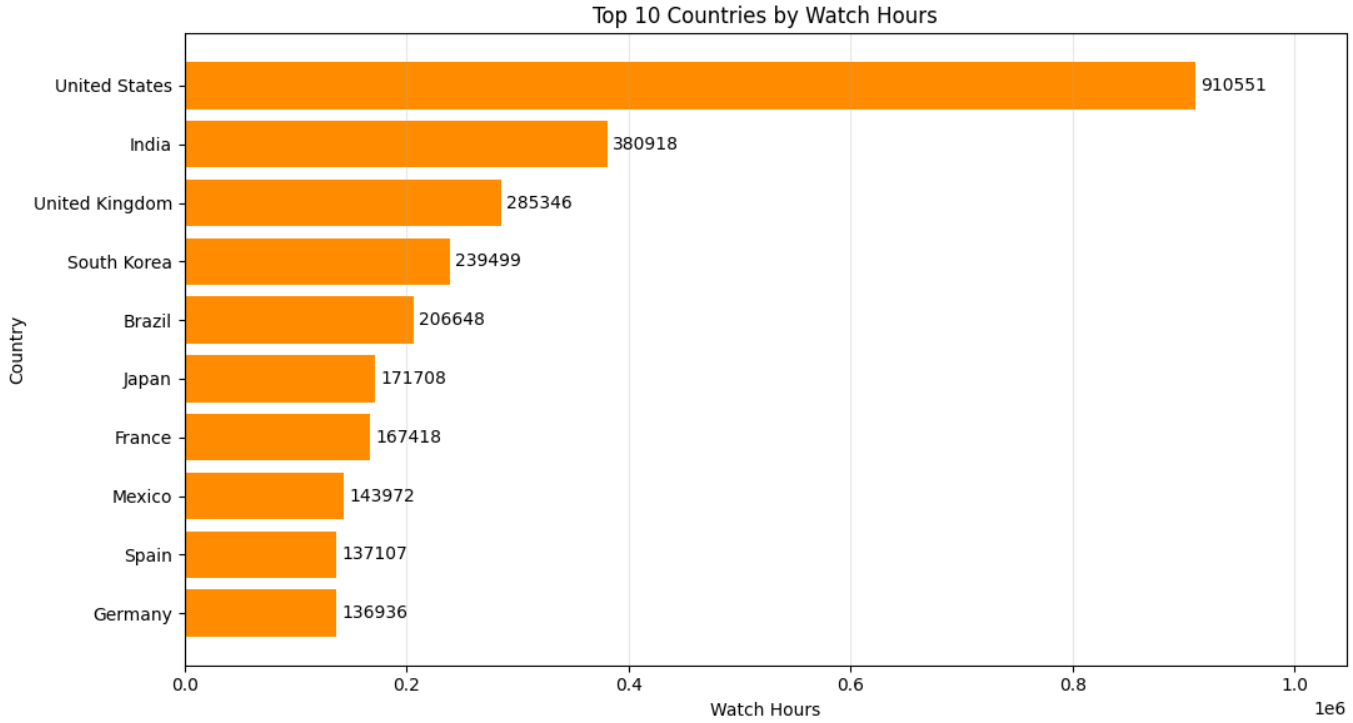

4. Content type split (Movies vs TV Shows)

Observation:

TV Shows account for approximately 86.5% of recorded viewing duration, while Movies account for about 13.5%. TV Shows are the main source of viewing activity on the platform.

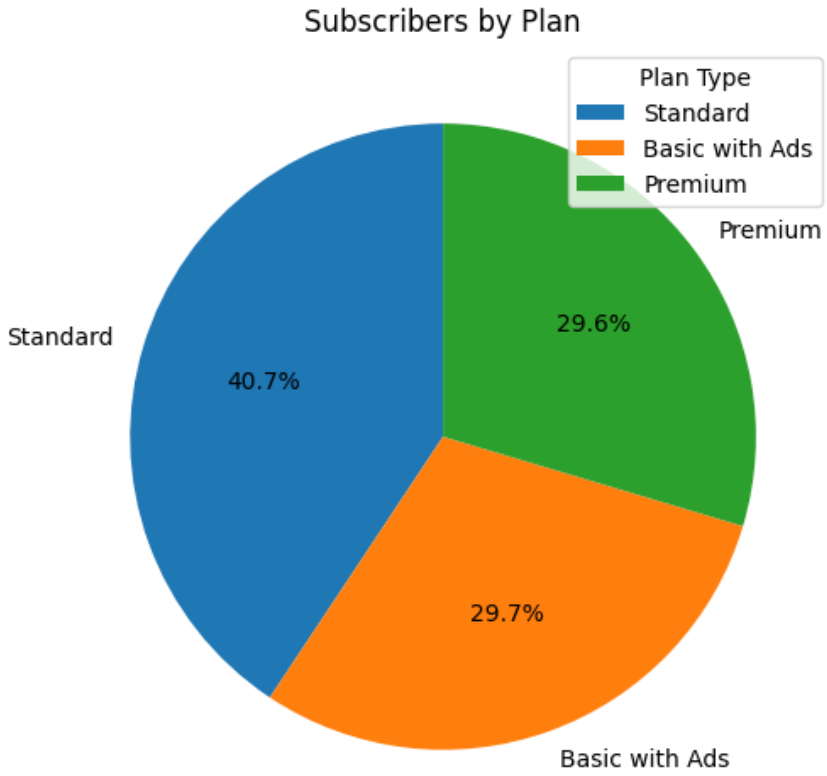

5. Top 10 countries by watch hours

Observation:

The United States has the highest recorded viewing duration, followed by India and the United Kingdom. These countries appear to be important markets for StreamFlix and may deserve closer attention when planning content.

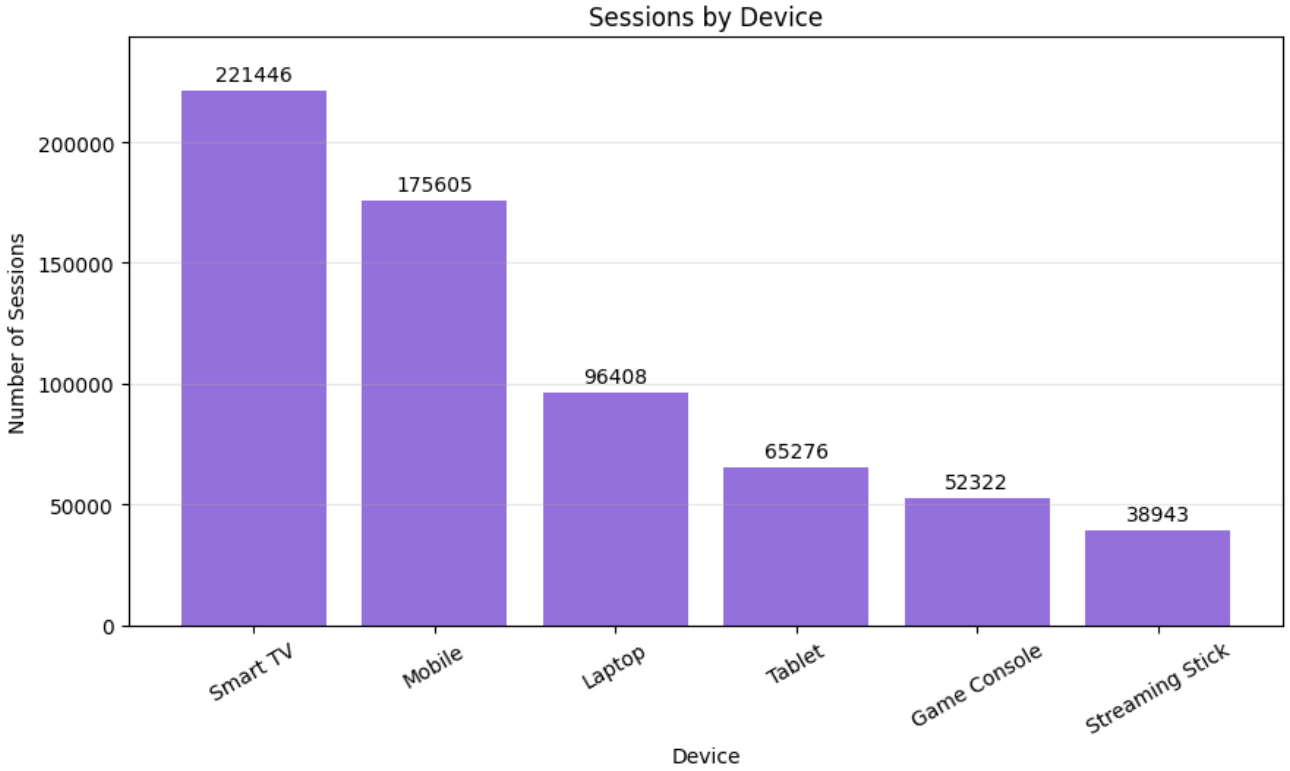

6. Subscriber plan distribution

Observation:

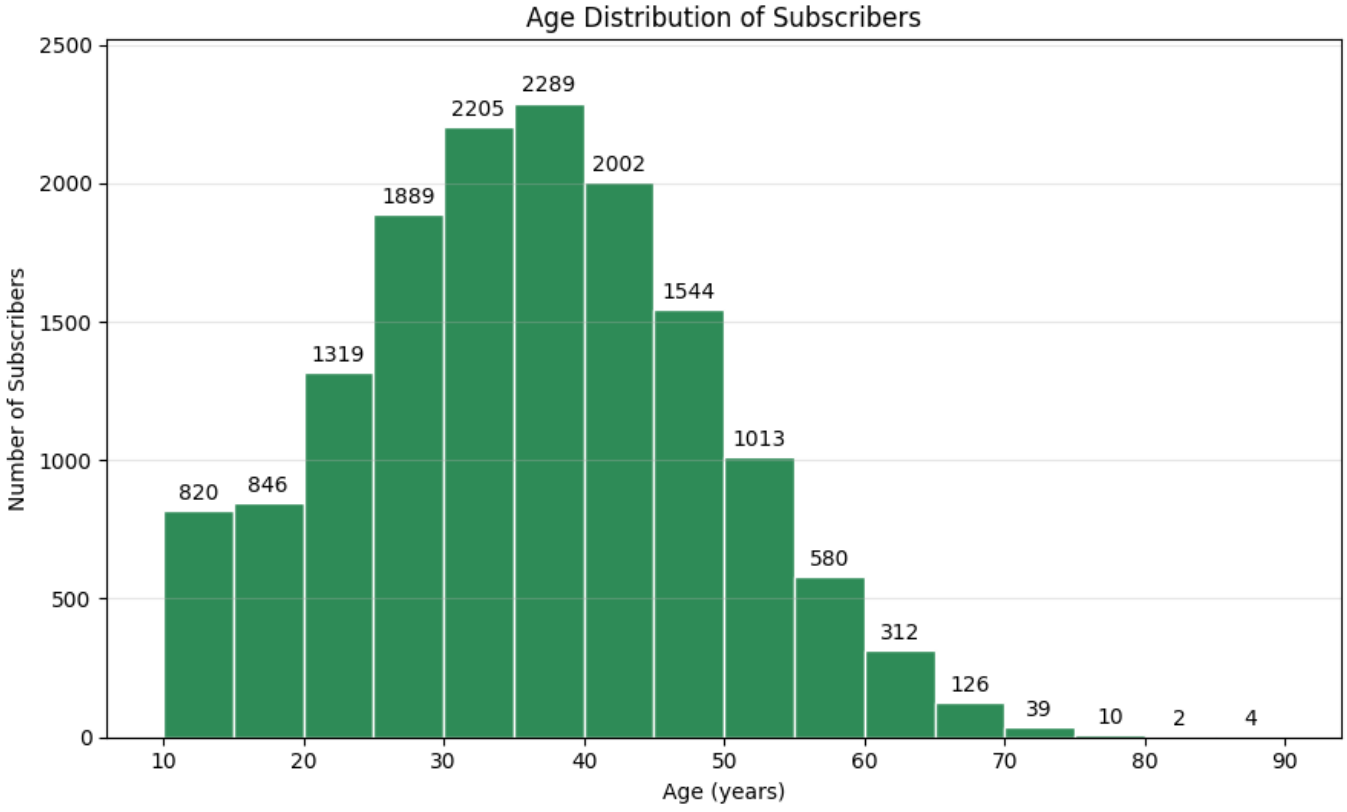

Standard is the most common plan, with 6,100 subscribers. Basic with Ads and Premium have similar subscriber counts, suggesting that the subscriber base is spread across all three plans.

7. Device usage

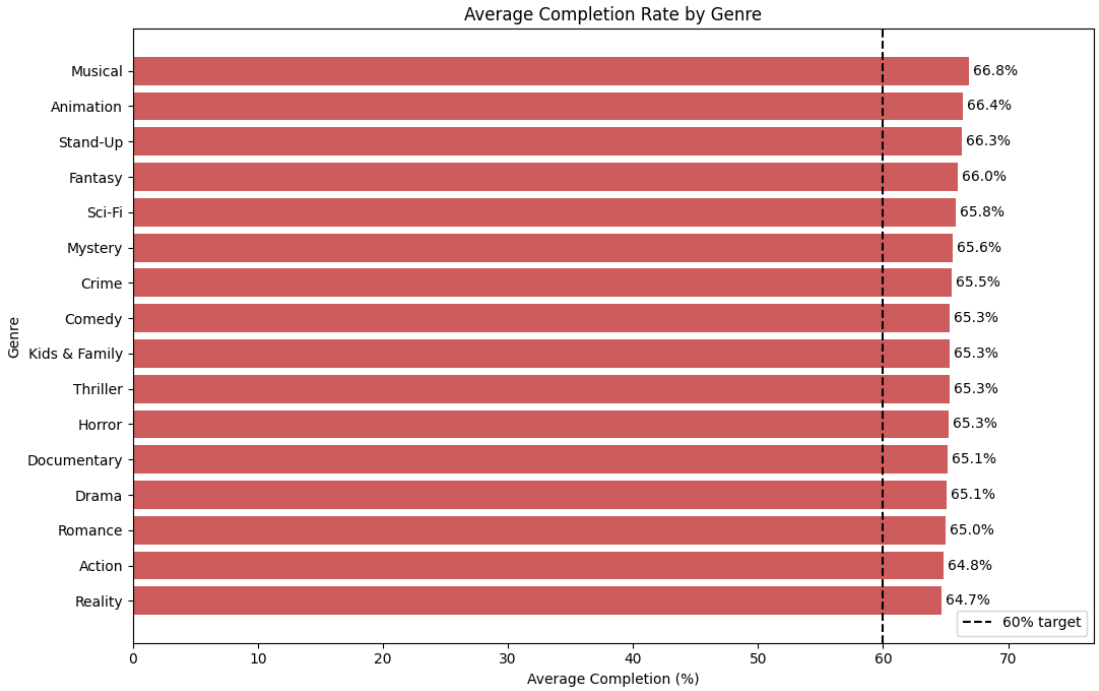

Observation:
Smart TVs account for the most viewing sessions (46,199), followed by Mobile devices (36,447). StreamFlix should continue to provide a smooth viewing experience on both devices.

8. Age distribution of subscribers

Observation:
Subscribers aged 35-44 form the largest age group, followed by those aged 25-34. The 35-44 group also has the highest total watch time, while the 45-54 group has the highest average watch time per subscriber among the displayed age groups.

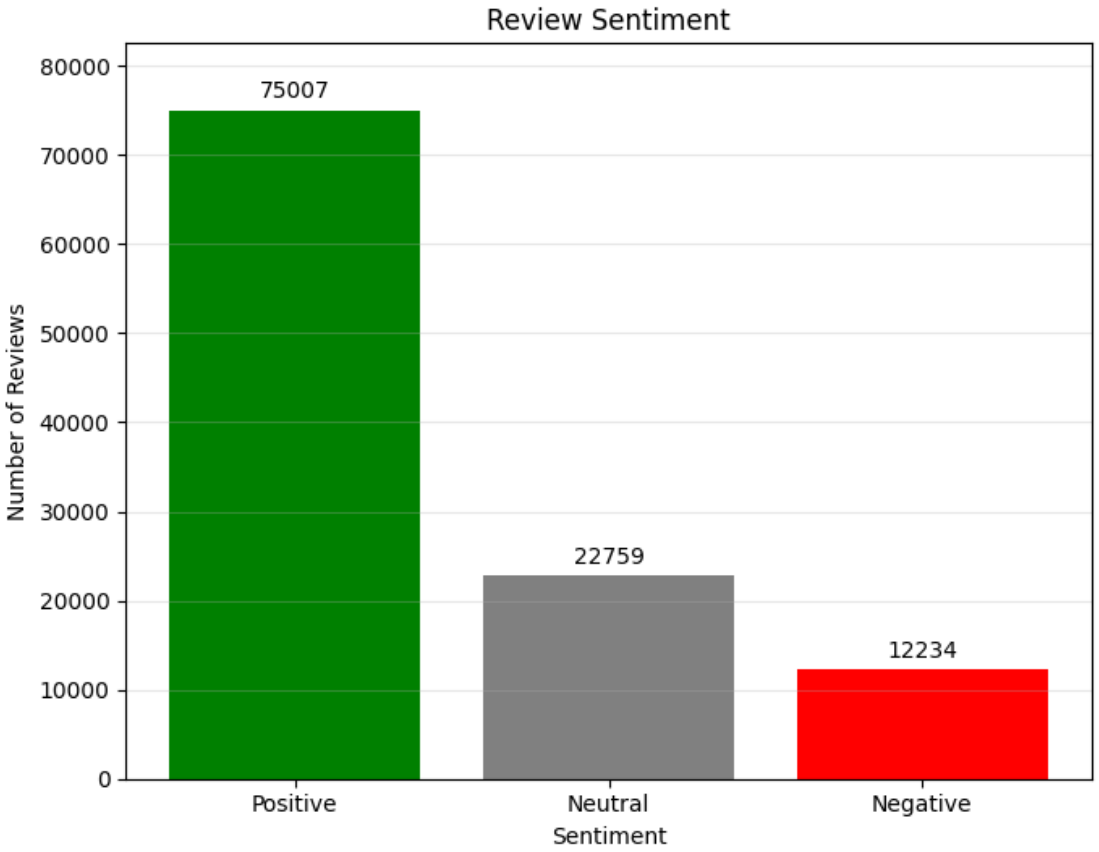

9. Completion rate by genre

Observation:

Musical has the highest average completion rate at 66.8%, while Reality has the lowest at 64.4%. All genres are above the PRD's 60% target, although the differences between genres are relatively small.

10. Review sentiment breakdown

Observation:

Most reviews are Positive (68.6%), followed by Neutral (20.5%) and Negative (10.9%). This suggests generally positive subscriber feedback, though negative reviews should still be examined to identify areas for improvement.
